**Comment**

ImmunoCAP Phadiatop is an in vitro qualitative and semiquantitative assay for graded determination of IgE antibodies specific to inhalant allergens in human serum or plasma. It is intended for in vitro diagnostic use as an aid in the clinical diagnosis of IgE mediated allergic disorders in conjunction with other clinical findings, and is to be used in clinical laboratories. In patients suffering from extrinsic asthma, hay fever or atopic eczema, symptoms develop immediately after exposure to specific allergens. This immediate type of allergy is a function of a special type of serum antibodies belonging to the IgE class of immunoglobulins.

Kindly correlate with clinical findings
