Interpretation

Antinuclear antibodies are the most sensitive screening test for autoantibodies in patients suspected of connective tissue diseases. They are a heterogenous group of autoantibodies directed against ds-DNA, histones, SSA / Ro, SSB / La, Sm, Sm / RNP, Scl-70, Jo-1 & Centromere. ANA 's have also been detected in patients with Autoimmune Hepatitis (80%), Primary biliary cirrhosis (60%), Alcohol related liver disease (50%), Viral hepatitis B (40%). Presence of ANA has also been detected in individuals taking certain drugs like Hydrallazine, Isoniazid, Chlorpromazine; family of SLE patients; healthy and elderly persons

Kindly correlate with clinical findings
