**Comment**

Specific IgE is an in vitro test system for the quantitative measurement of allergen specific IgE in human serum or plasma. It is intended for in vitro diagnostic use as an aid in the clinical diagnosis of IgE mediated allergic disorders in conjunction with other clinical findings, and is to be used in clinical laboratories. A definite clinical diagnosis should not be made as a result of single test only, but should be made by taking into account clinical history and other laboratory findings.

Kindly correlate with clinical findings
