Interpretation

This test is a screening test performed on VITROS immunodiagnostic system using immunometric technique.

1. Hepatitis C (HCV) is an RNA virus of Flavivirus group transmitted via blood transfusions, transplantation, injection drug users, accidental needle punctures in healthcare workers, dialysis patients and rarely from mother to infant.
2. 10% of new cases show sexual transmission. As compared to HAV & HBV, chronic infection with HCV occurs in 85% of infected individuals.
3. This test is indicator of past or present infection, but does not differentiate between Acute / Chronic / Resolved infection .HCV RNA PCR recommended in all reactive results to differentiate between past and present infection
4. A definitive clinical diagnosis should not be made by result of a single test only, but should be made by taking clinical history and other laboratory findings in to account.

Kindly correlate with clinical findings
