Age/Gender	OP/IP No
Max ID/Mobile	Collection Date/Time
Lab ID	Receiving Date
Ref Doctor	Reporting Date
Passport No.	

Molecular Diagnostics

Test Name	Result	Unit	Bio Ref Interval
-----------	--------	------	------------------

HCV RNA Qualitative, Real Time PCR , Plasma EDTA

Real Time PCR

HCV RNA (Qualitative) PCR Not Detected

Note In chronic HCV cases, HCV PCR test results should be interpreted with caution, as the viremia may be intermittent yielding varying HCV PCR results. All the results should always be correlated with clinical status and history of the patient.

Comments:

- The HCV RNA PCR is an in vitro nucleic acid amplification test for the qualitative detection of hepatitis C virus (HCV) RNA in human plasma.
- This test is intended for use in conjunction with clinical presentation and other laboratory markers for disease prognosis and for use as an aid in assessing viral response to antiretroviral treatment as measured by changes in EDTA plasma HCV RNA levels.
- This test is not intended to be used as a screening test for HCV or as a diagnostic test to confirm the presence of HCV infection.

Kindly correlate with clinical findings
