Weak Positive 10 - 40
Positive > 40

Comment :

Cardiolipin antibodies is detected in autoimmune disorders particularly systemic lupus erythematosus (SLE), vascular thrombosis, thrombocytopenia etc. Elevations of cardiolipin antibody is associated with increased risk in idiopathic thrombocytopenia purpura, rheumatoid, psoriatic, arthritis primary sjogren's syndrome.

Interpretation :

Cardiolipin IgG is intended for the in vitro quantitative measurement of IgG antibodies directed to cardiolipin in serum and plasma to aid in the diagnosis of antiphospholipid syndrome (APS) and to evaluate the thrombotic risk in patients with systemic lupus erythematosus (SLE). A definitive clinical diagnosis should not be based on the results of a single diagnostic method, but should only be made after all clinical and laboratory findings have been evaluated.

Interpretation :

Anti phospho lipid antibodies are used to detect lupus anticoagulant (LAC), anti cardiolipin(ACL) antibodies and anti β 2 glycoprotein antibodies.

Phospholipid-Screen-GM is a solid phase enzyme immunoassay for theseparate qualitative and quantitative detection of IgG and/or IgM antibodies againstphospholipids in human serum. The assay is an aid in the diagnosis and risk estimation of thrombosis in patients with systemic lupus erythematosus and antiphospholipid syndrome (APS).
