

Laboratory Investigation Report

Patient Name	Centre
Age/Gender	OP/IP No/UHID
MaxID/Lab ID	Collection Date/Time
Ref Doctor	Reporting Date/Time

Serology Special

Max MMR Antibody Profile

Test Name	Result	Unit	Bio Ref Interval
Measels/Rubeola -IgG, Serum CLIA			
Measels/Rubeola, IgG CLIA	30	AU/mL	

Ref. Range

Negative < 13.5
 Equivocal 13.5 - 16.5
 Positive > 16.5

Interpretation

Positive IgG antibodies indicate previous exposure to Rubeola virus or immunity.

Mumps Virus Antibody, IgG, Serum

CLIA

Mumps Virus IgG Antibody CLIA	144	AU/mL
----------------------------------	------------	-------

Ref. Range

Negative < 9,0
 Borderline 9.0 - 11.0
 Positive > 11

Interpretation

1. Mumps is a common contagious disease with relatively moderate symptoms during childhood, but increasing complications when adults are infected.
2. The causative virus belongs to Paramyxoviridae family. Both infection or vaccination with Mumps virus leads to persistent immunity.
3. The immunity levels are monitored by IgG EIA tests. Increasing IgG titres are helpful in determining the causative agent and ruling out cross reactions with Parainfluenza Type 2 virus.
4. A definitive clinical diagnosis should not be made by result of a single test only, but should be made by taking clinical history and other laboratory findings in to account.

Kindly correlate with clinical findings

Conditions of Reporting: 1. The tests are carried out in the lab with the presumption that the specimen belongs to the patient name as identified in the bill/test request form. 2. The test results relate specifically to the sample received in the lab and are presumed to have been generated and transported per specific instructions given by the physicians/laboratory. 3. The reported results are for the information and interpretation by the referring doctor only. 4. Some tests are referred to other laboratories to provide a wider test menu to the customer. 5. Max Healthcare shall in no event be liable for accidental damages loss, or destruction of specimen which is not attributable to any direct and mala fide act or omission of Max Healthcare or its employees. Liability of Max Healthcare for deficiency of services, or other errors and omissions shall be limited to fee paid by the patient for the relevant laboratory services.

Serology

Max MMR Antibody Profile

Test Name	Result	Unit	Bio Ref Interval
Rubella IgG, Serum			
Rubella IgG CLIA	47.8	IU/mL	

Ref. Range

Non Reactive < 10.0
Positive >= 10.0

Interpretation

1. A positive Rubella IgG antibody indicates successful immunization or past exposure.
2. The result of a single antibody determination should not be used to diagnose recent infection. Acute and convalescent sera should be collected 2-4 weeks apart and a rising titer of more than 30% is considered significant.
3. A definitive clinical diagnosis should not be made by result of a single test only, but should be made by taking clinical history and other laboratory findings in to account.
